
jsp error 404 JSP 1.0 with Error 404

Posted by scjwong - 2008/05/08 05:49

I was trying to test to call a jsp in WebSphere 3.02. I started to call the very_simple.jsp which was shipped with the product. However, I got the Error 404 after calling the jsp, localhost/very_simple.jsp. I have started the Default Server in the Admin console, I have change the WebSphere to use the JSP 1.0 by remove the default jsp, and have enabled the JSP 1.0 for default app. I also have change the default_app.webapp to have the jsp use the com.ibm.ivj.jsp.runtime.JspDebugServlet . I am still getting the error. Just wondering if anyone know what steps I have missed. Thanks in advance. The error message as following : Error 404 An error has occured while processing request:http://localhost/very_simple.jsp Message: reported an error Target Servlet: JSP 1.0 Processor StackTrace:
