
popup image Swap Image / Popup

Posted by TCF - 2008/05/08 06:48

I have a detail page for a product with 5 thumbnail images and a large image. When you click on of the thumbnails it swaps the main image (using the swap image function). The problems is that the client now wants to have a pop up with a larger image and im not sure what to sent across to the popup page (as i don't know what image will be the main image). Thisshows image 1 (not image 2,3,4 or what ever the main image might be):

popup.asp?Image1=<%=RsProducts.Fields.Item(Image1).Value)% Any clues TFFX
