
vb6 greater than or equal too greater than or equal to in SQL???

Posted by David A. Kotas - 2008/05/08 06:48

.OR & altVALUE & =.) AND (& altVALUE & <.OR & altVALUE & = .);) i have tried using teh BETWEEN...AND statement, but that doesn't work either! by work, i mean that it NEVER identifies the outer ranges, ie if my value was 10 and my low is 10, it NEVER comes back with a greater than 0 recordset count...argh!!! i need something that will let test for a greater than or equal to condition help! thanks in advance, dave.

What are the data types of all these fields in tblRangeCheck? I think the operators = , Not < and Between <low and <high should all work, so I wonder if something else is wrong.

hi all - i am writing a program that needs to check the range of a value... i'm using the following line of code: Set rst = db.OpenRecordset(SELECT tblrangecheck.size FROM tblRangeCheck WHERE tblrangecheck.size = ' & altpcsize & ' AND tblrangecheck.dielectriccode = ' & altpcdielectric & ' AND tblrangecheck.voltagecode = ' & altpcvoltage & ' AND (& altVALUE & .OR & altVALUE & =.) AND (& altVALUE & <.OR & altVALUE & = .);) i have tried using teh BETWEEN...AND statement, but that doesn't work either! by work, i mean that it NEVER identifies the outer ranges, ie if my value was 10 and my low is 10, it NEVER comes back with a greater than 0 recordset count...argh!!! i need something that will let test for a greater than or equal to condition help! thanks in advance, dave.
