
mssql server MSSQL server 7 upgrade to 2000

Posted by Lena - 2008/05/08 07:24

Hi! I'm planning the SQL Server 7 upgrade to MSSQL Server 2000. My plan is to do fresh install of SQL Server 2000 on new box, then backup sql server 7 db and restore this db on new sql server 2000 box. Is this correct? My understanding is that I don't have to install sql server 7 first on new box, then restore my db, and then upgrade sql server 7 to 2000. Thank you, Lena

Correct. SQL2K can restore SQL7 databases. But not system databases...

You probably want to run sp_updatestats after the restore.
